

PROGRESSIVE ADVANCED MATERIALS APPOINTS A SENIOR QUALITY ENGINEER

1st July 2022, Newbury, UK.

We are delighted to announce that Ian Howe will be joining the team at Progressive Advanced Materials taking the role of Senior Quality Engineer. Ian brings his widely acknowledged capabilities and wealth of experience, having worked in F1 for the past 15+ years.

Progressive Advanced Materials are already recognised as an industry leading supplier to F1, with an unparalleled commitment to quality. This appointment will enable us to improve product and process quality whilst creating a clear communication line for our customers, specifically relating to quality.

Ian commented: "I recognised the opportunity to join this already established business which has recently invested heavily, enabling them to offer a full turnkey solution for composites component manufacture. Giving them direction on the next part of the journey, is thrilling and very much in line with my own ambitions and quality expectations. Supporting the business in taking these capabilities forward in the world of Motorsport, Automotive and Aerospace whilst looking at future opportunities is an exciting prospect".

With an ever-increasing demand for reliably delivering exceptional components, in challenging timescales, the initial focus for Ian will be to put emphasis into identifying and implementing improved systems and quality standards. The aim is to improve on an already impressive service which currently delivers results and consistently exceeds customer expectations.

Progressive Advanced Materials is part of The Progressive Technology Group, working alongside our Advanced CNC Machining and Additive Manufacturing divisions. As a leading composite engineering company, we deliver high quality, reliable, fully-finished carbon components in accelerated lead times, delivering for our clients on the most demanding projects.

"Through careful recruitment of experienced, highly skilled, composite professionals we have already built a team with the passion and initiative to collaborate with our clients on everything from challenging production assemblies to fast turnaround prototype components. Realising the opportunity to bring on board someone of Ian's industry experience reaffirms our desire to be a quality driven organisation."
